Purpose

- The 505(b)(2) application is intended to encourage sponsors to develop innovative medicines using currently available products
- Created in 1984 as part of the Hatch-Waxman Amendments to the Federal Food, Drug and Cosmetic Act
- According to Section 505(b)(2) guidelines, an NDA approval through 505(b)(2) can be obtained for a new drug without conducting the full complement of safety and efficacy trials and without a "right of reference" from the original applicant.

PROGRAMME REPORT

Title:

ONE WEEK ONLINE FDP ON INNOVATION IN DRUG DELIVERY SYSTEM

A One-week online Faculty development program which was entitled as "Innovation in Drug Delivery System" was inaugurated on 31/05/2021 at 9AM by our principal sir Dr. T E G K Murthy garu. After inauguration the program was handed over to first day resource person Dr. Haranath kumar vaddi, on title Importance of Innovation in Transdermal Drug Delivery -key consideration. He had explained well about transdermal patch that you stick on to your skin like an adhesive bandage which utilises passive diffusion of drugs across skin as the delivery mechanism. It is the simplified medication regimen leads to an improved patient compliance and reduced interpatient intra patients' variability. Self-medication is possible with this type of system. Faculty members from various Pharmacy institutes were attended to this Faculty development program.

On second day 01/06/2021, the program was initiated by resource person Dr. Rajesh vadlapatla had a session about the topic "Modified Drug Delivery Recent Trends and Scenarios Case Study" He has explained well about modified release drug delivery system are developed to control the rate and site of release of drugs to achieve specific clinical objectives that cannot be attained with conventional dosage form. He will also explain status and future direction. The term modified release the product is used to described products that alter the timing and/ or the rate of release of the drug substance- extended drug release, delayed release targeted release, orally disintegrated tablets etc.

On third day 02/06/2021 the program was engaged by Mr. Kapil Eswar Swin on the topic "New Drug Application, Fdp Regularity Pathway Overview". The application for a new drug application that contains full reports of investigations of safety and effectiveness, where at least some of the information required for approval comes from studies not conducted by or for the applicant and for which applicant has not obtained a right of reference are use.

On Fourth day 03/06/2021 the program was initiated and engaged by Dr, Amir Shirazi on the topic "Cyclic Peptide Based Delivery System". He has explained cyclic peptides are polymer

nanotubes which are extensively use in drug delivery system to overcome major obstacles in permeation in to cells rational designed cyclic peptide contain tryptophane arginine and cysteine form self-assembled non-starchers newly designed cyclic peptide are found to be efficient to carry therapeutic biological macromolecules. The cyclic peptides are exported to act as adoptive system for drug delivery and selective disease targeting. They play a key role in biotechnology in therapeutics and used as diagnostic tools

On fifth day 04/06/2021 the program was engaged by Dr. Sanjay kumar gayakwad "Integration of Teaching and Research to Attract Students Towards Academic Research on Antisense Oligonucleotide Drug Delivery". He has explained about oligonucleotide-based therapies are a promising approach for treating a wide range of hard- to- treat diseases particularly genetic and rare diseases. These therapies involve the use of short synthetic sequences of DNA/RNA that can modulate gene expression are inhibit proteins through various mechanisms. Despite potential of these therapies a significant barrier to their wide spread use is the difficulty in ensuring their uptakes by target cells/ tissues. Strategies to overcome this challenge includes cell penetrating peptide conjugation, chemical modification, nano particle formulation and the use of endogenous vesicles, spiracle nucleic acid and smart material-based delivery vehicles.

On the sixth day the program was initiated and continued Dr. Ajay koomer "Remote Teaching and Assessment Post Covid-19 Situations". He has explained about peer assessment self-assessment, low stakes quizzes, gamified learning programmes that measures student progress. Peer assessment proved exemplars of feedback that is specific, constructive, and detailed if students have never prepared it before. Self-assessment beside being private and pressure free self-assessmentis also a prime means of developing students' meta cognitive abilities. With repeated practice they will be able to instinctively reflect on their learning on their mater of course

On the last day evening valedictory function was organized by the management of Bapatla College of Pharmacy. About thirty faculty members were attended from different colleges. The certificates of participation were distributed through online mode.

Program:

One day Training Program for Non-Teaching Faculty

Title Of the Program:

"Management of Accounts in Laboratory"

Trainer:

Shaik Rasool

Graduate in Chartered Accounts

Time: 9.00 AM-2 PM on 13/12/2018

The session was started at 9 AM and the program was inaugurated by Our principal Sir Dr. TEGK Murthy, with a brief introduction of the significance of this program, it was handed over to the resource person Mr. Shaik Rasool.

Mr. Shaik Rasool has explained the importance and necessity of management of accounts in the laboratory. He also explained how to manage accounts effectively in laboratories. Different tools used in the effective management of Accounts were explained.

Cost accounting is the most basic element of the laboratory's financial management structure. Historically, cost accounting in the nonmedical world referred to accumulating and assigning costs to units of production and departments, primarily for inventory valuation and income determination. In the health industry, micro cost accounting is distinguishable from macro cost (management/internal) accounting and serves multiple purposes. Micro cost accounting pertains to gathering and providing information for decision making. The range of decisions include managing recurring operations, making nonrecurring strategic decisions, and formulating major organizational policies. Macro cost accounting fulfills the

legal requirements of reporting to stockholders, auditors, governmental agencies, and other external parties.

All the non-teaching faculty members were attended to this training program and has gained very important knowledge on effective management of accounts in their professional responsibilities.
